

Chapter 1: Ingestion Subsystem

This chapter documents the ingestion subsystem of the platform and the operational duties that belong to the team that owns it. The service reads its configuration at startup and refuses to boot when a required value is missing, which keeps a partial deployment from serving traffic. Operators are expected to review the dashboards after every release and record any anomaly in the shared incident log before closing the change. Routine maintenance happens during the weekly window agreed with the platform group, and emergency work follows the on-call escalation path.

The verification marker for this chapter is ALPHA-PAGE-ONE, and that marker appears on no other page of this document.

Chapter 2: Retrieval Subsystem

This chapter documents the retrieval subsystem of the platform and the operational duties that belong to the team that owns it. The service reads its configuration at startup and refuses to boot when a required value is missing, which keeps a partial deployment from serving traffic. Operators are expected to review the dashboards after every release and record any anomaly in the shared incident log before closing the change. Routine maintenance happens during the weekly window agreed with the platform group, and emergency work follows the on-call escalation path.

Chapter 3: Evaluation Subsystem

This chapter documents the evaluation subsystem of the platform and the operational duties that belong to the team that owns it. The service reads its configuration at startup and refuses to boot when a required value is missing, which keeps a partial deployment from serving traffic. Operators are expected to review the dashboards after every release and record any anomaly in the shared incident log before closing the change. Routine maintenance happens during the weekly window agreed with the platform group, and emergency work follows the on-call escalation path.
